

■ Success Through Precision

Bildnachweis: www.pixelio.de

A Daily Situation

The practice-oriented functionality makes the tool measuring system ADI Compact an almost unrivaled presetting device with integrated optics.

The ideal application of ADI Projection Tool Presetters are, on the one hand high profitability through quick and easy handling, on the other hand the safety of maximum precision.

Advantages of ADI Projection Tool Presetters

Fast, convenient measurement

High precision

Stable anodized aluminum body

Modular structure

Measuring angles and cutting geometries

Proven measuring system from Mitutoyo

Precision-mounted tool holder

No damage to tools due to contactless measuring

No maintenance costs

■ The 20x magnification allows a measurement of cutting geometries. Non-contact testing completely eliminates damage to cutting edges of the tool to be measured. An adjustable radius and angle template in the projector allows you to control cutter radii and cutting angles. Fast and precise pre-setting is ensured by the hand wheels with fine adjustment in Z and X axis.

In order to avoid damage, both hand wheels are provided by over speed protection. Proven measuring system from Mitutoyo and a precision-mounted tool holder, are stand in an almost unique price-performance ratio.

Proven measuring system from Mitutoyo
Data output in both axes

Precision bearing spindle. 90 ° indexing (optional).

Non-contact measurement of tool cutting edges.

Precise measurement through excellent optics with 20x magnification. Revolving focusing screen with reference radii and angle adjustment.
